

# Bampton Community Centre

## Oxfordshire

### At the Centre of Village Life

The Bampton Community Centre project re-invigorates an existing listed building and provides new accommodation that allows the community centre to continue to function at the centre of village life.

All additions, repairs and renewals are carried out sympathetically in materials and styles reflecting the character of the original building. The 2 new extensions, whilst being sympathetically placed in relation to the original building are strong statements in their own right and reinforce street presence that had been lost. Principal rooms in the original are largely left unaltered, with the period features being retained and protected. New walls and insertions proposed are to be lightweight studwork walling which will not damage the existing fabric of the building.

### Details
